

Project Intent:

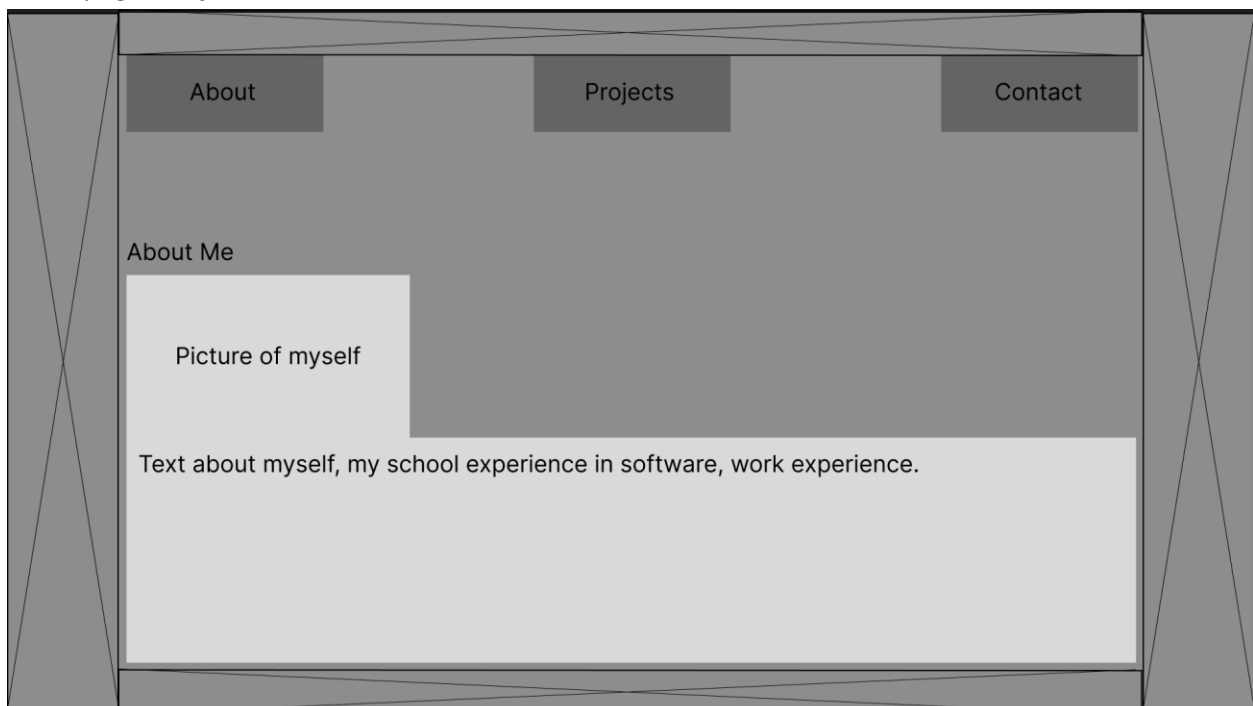

Because the project was intended to be a static page hosted on Netlify, I decided to create a resume website to adapt my current resume into a more interactive experience as opposed to my paper resume. I believe that this could provide me an advantage over having just a paper resume, as it shows employers an example of my work while also hosting information about myself, including my skills, as well as information about what I've learned while in school. I figured that the site should have a page with information about myself as well as my interests and experience, a page for information about projects I've done throughout school and on my own, and a page with links on how to contact me. All in all, this would be a 3-page resume. For styling, I personally like dark themed sites that are simple and easy to read. I also like to have a top-facing navigation bar that is sticky on screen, with information clearly laid out.

Intended site flow:

Pitchboard:

johnrumler.com

johnrumler.com is a personal resume page for John Rumler as a paper resume alternative in order to stand out on applications. It allows for more information to be conveyed in an interactive manner.

johnrumler.com aims to create an interactive experience to give employers and others curious about John information about works he has created and topics explored both individually and as a part of schooling. It also gives potential employers and peers an idea of proficiency and skill-set for projects and prospective work.

Personas

Prospective Employer

An employer viewing the site as a resume

Peer

A peer either in school or work attempting to glean a skill-set for reference to delegate project responsibilities
